Use Case diagram for Airline Reservation System

Brief Description

Online airline ticketing saves time and money for the customer as well as the airline company thereby making air travel more customer-centric. This project is an attempt to simulate the basic concepts of an airline reservation system.

Our airline ticket reservation system has the following features:-

- Customers can:
 - Create an account
 - Search for available flights for a particular city-pair
 - Book tickets in the class of their choice
 - Cancel booked tickets
 - View booked tickets history

Brief Description

- Flights can be sorted according to price, number of stops and duration.
- For international flights, the customers will be redirected to fill in VISA and passport details.
- If a customer is a student, the person gets an additional discount.

Use Case Specification

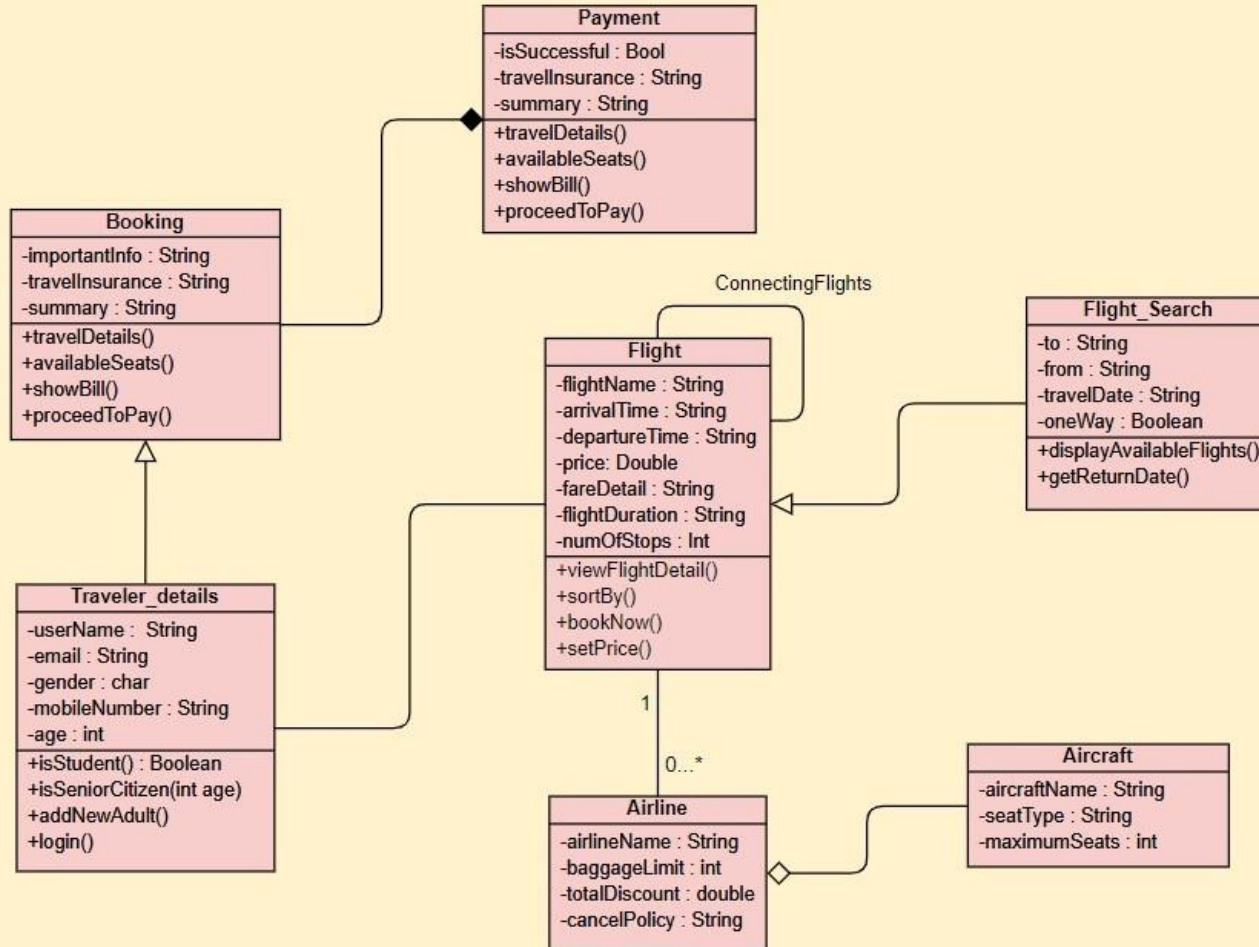

Number	1
Name	Search flight
Summary	User searches for the flights available from the destination
Preconditions	User has visited the website
Postconditions	User has selected both the places for start and end of journey
Primary Actor(s)	Passenger
Secondary Actor(s)	Airport Database
Trigger	The user has accessed the airline reservation website and is searching for flight.

Main Scenario	Step	Action
	1	User selects both the origin and destination of air travel from the list
	2	A list of airlines with flight times and prices is displayed
	3	User selects the convenient flight with reasonable price
	4	Airline database checks for available seats
	5	User books number of seats according to availability
	6	User is redirected to enter details
Extensions	Step	Branching Action
	5 a	Not enough seats are available, returns user to step 2

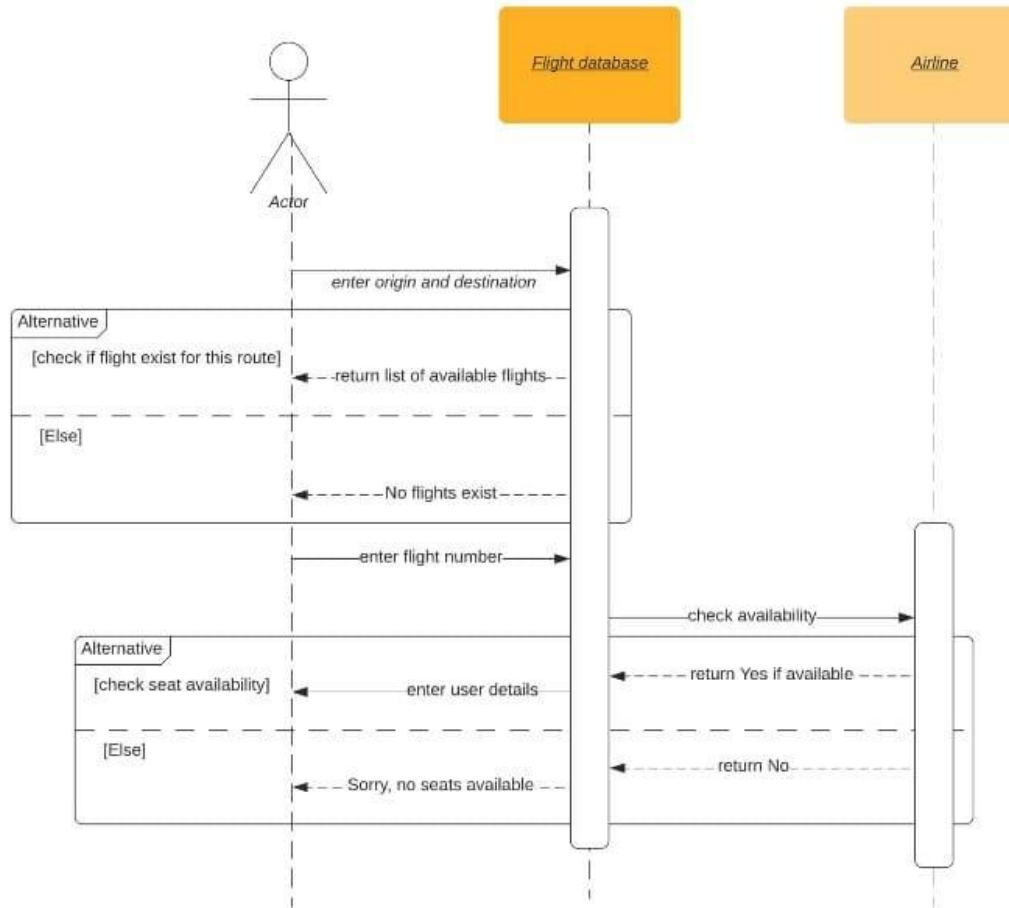

Number	2	
Name	User details	
Summary	User enters details (Email id, mobile number, name, student or not)	
Preconditions	User has selected the flight	
Postconditions	User has entered details	
Primary Actor(s)	Passenger	
Secondary Actor(s)	Airline Manager	
Trigger	The user has finalized the selection of the flights and has clicked “Enter details”.	
Main Scenario	Step	Action
	1	An empty form with fields is displayed
	2	User enters details
	3	Details are recorded and user is directed to make payments
Extensions	Step	Branching Action
	3a	User selects an International flight
	3b	System directs the user to enter VISA and Passport details

Number	3	
Name	Payment	
Summary	User enters amount to be paid	
Preconditions	User has selected flight and entered details	
Postconditions	User has made the payment, receives receipt	
Primary Actor(s)	Passenger	
Secondary Actor(s)	Admin, Payment Gateway	
Trigger	User has clicked the 'Pay Fare' button	
Main Scenario	Step	Action
	1	Payment window is shown to the user
	2	User is prompted to select UPI as payment option
	3	User enters his/her UPI ID in the field and makes payment
	4	Ticket is generated and receipt is shown to the user
Extensions	Step	Branching Action
	3 b	If UPI ID is invalid, return to step 2
